Variable definitions

Variable name	Variable definition
autoID	Unique ID for each consumer resource interaction
link.citation	Citation for the trophic link between consumer and resource
link.methodology	How was the trophic link established: published account (e.g., journal, book, inte
interaction.type	Classification of the interaction (Note: this is not a classification of consumer or
interaction.dimensionality	Classification of the interaction (not consumer or resource) by the dimensionality
Interaction.classification	Classification of the interaction (not consumer or resource) as indiviudal-based in
con.taxonomy	Highest available taxonomic resolution description of the consumer species
con.taxonomy.level	Level of taxonomic resolution (e.g., class, order, family, genus, species)
con.common	Common name of the consumer
con.lifestage	Lifestage of the consumer: adults, juveniles, larvae, nymphs, nauplii.
con.metabolic.type	invertebrate, ectotherm vertebrate, endotherm vertebrate, primary producer, hete
con.movement.type	walking, swimming, flying, sessile, other
con.size.citation	Reference for the body sizes of consumer
con.size.method	Methodology of body size measurement of the consumer: measurement (individu
con.length.min[cm]	Minimum length measured of the consumer

con.length.mean[cm]

Mean length of the consumer population that is involved in this trophic interaction – this can be all individuals of a species or sub-groups such as adults

Floating Point

-999

con.length.max[cm]

Maximum length measured of consumer

Floating Point

-999

con.mass.min[g]

Minimum mass measured

Floating Point

-999

con.mass.mean[g]

Mean mass of the population that is involved in this trophic interaction – this can be all individuals of a species or sub-groups such as adults

Floating Point

-999

con.mass.max[g]

Maximum mass measured

Floating Point

-999

res.taxonomy

Taxonomic description of the resource species

Character

NA

res.taxonomy.level

Level of taxonomic resolution (e.g., class, order, familiy, genus, species)

Character

NA

res.common

Common name of the resource if applies

Character

NA

res.lifestage

Characterizes the lifestage of the species that is involved in the trophic interaction: adults, juveniles, larvae, nymphs, pupae, nauplii, eggs.

Character

NA

res.metabolic.type

invertebrate, ectotherm vertebrate, endotherm vertebrate, primary producer, heterotrophic bacteria, heterotrophic fungi, detritus, dead organic material, other

Character

NA

res.movement.type

walking, swimming, flying, sessile, floating, other

Character

NA

res.size.citation

Reference for the body sizes of resource

Character

NA

res.size.method

Methodology of body size measurement of the resource: measurement (individuals are field-sampled and masses are measured), regression (weight-length regression with measured lengths), published account (e.g., field guide), expert (data obtained from expert knowledge).

Character

NA

res.length.min[cm]

Minimum length measured of the resource

Floating Point

-999

res.length.mean[cm]

Mean length of the population that is involved in this trophic interaction – this can be all individuals of a species or sub-groups such as adults

Floating Point

-999

res.length.max[cm]

Maximum length measured

Floating Point

-999

res.mass.min[g]

Minimum mass measured

Floating Point

-999

res.mass.mean[g]

Mean mass of the population that is involved in this trophic interaction – this can be all individuals of a species or sub-groups such as adults

Floating Point

-999

res.mass.max[g]

Maximum mass measured

Floating Point

-999

geographic.location

Most detailed description of where the study took place that is available (country, region, city, etc.)

Character

NA

longitude

In degrees

Floating point

-999

latitude

In degrees

Floating point

-999

ecosystem.type

Broad habitat description: terrestrial aboveground, terrestrial belowground, lakes, streams, marine

Character

NA

study.site

Most detailed description of the study site

Character

NA

altitude

Altitude in meters above sea level

Floating point

NA

depth

For aquatic studies, depth below water level in meters (marine or freshwater)

Floating point

NA

sampling.time

Description of study time as accurate as possible (Year, month, day).

Character

NA

sampling.start.year

Year when study began

Integer

NA

sampling.end.year

Year when study ended

Integer

NA

notes

Additional information

Character

NA

foodweb.name

Name of the food web

Character

NA
